

edge computing -
sensors to collect data
from the world

use **sensors** to convert real-world phenomena into signals

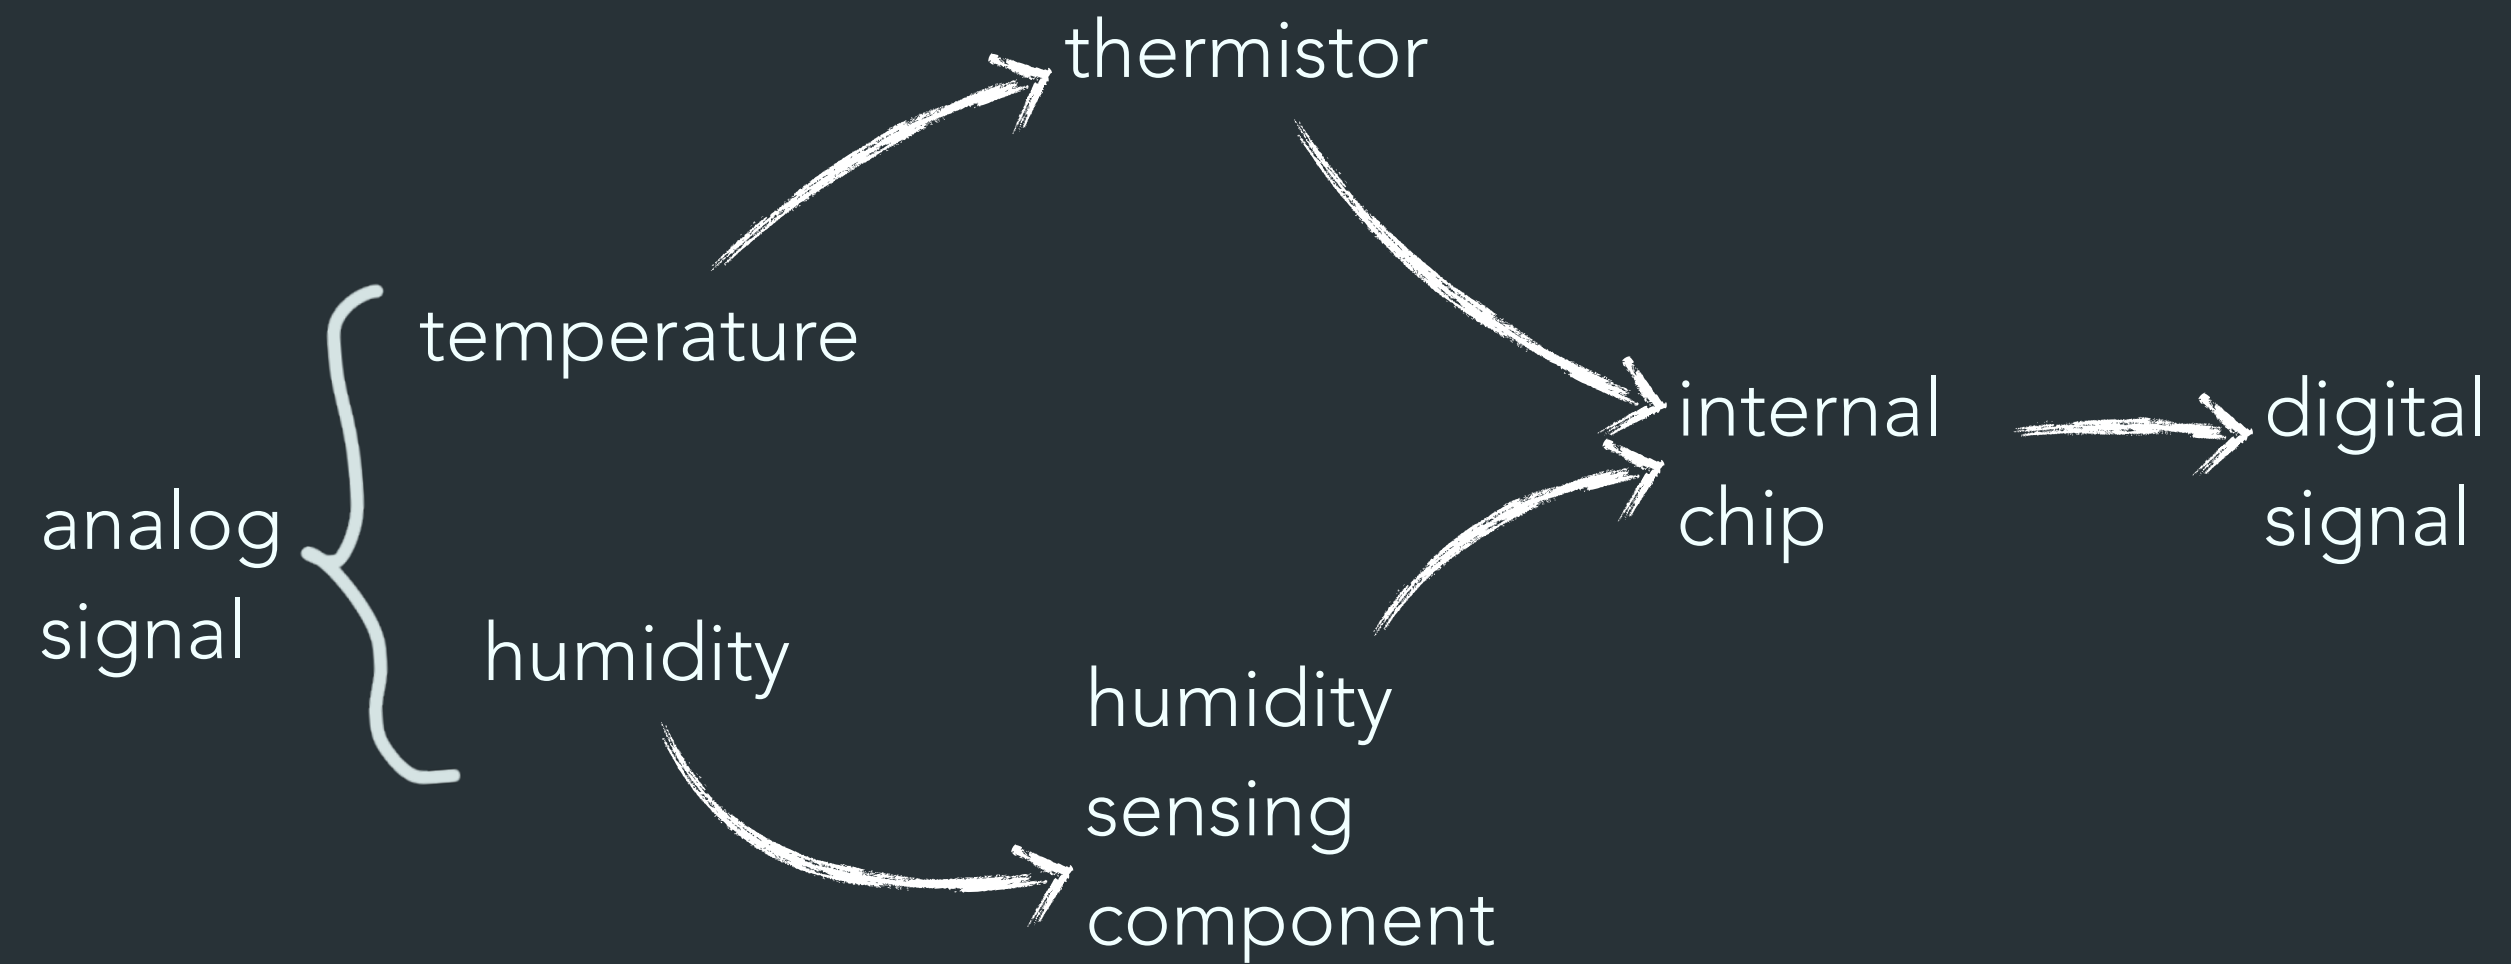

measure temperature and relative humidity with **DHT** sensor

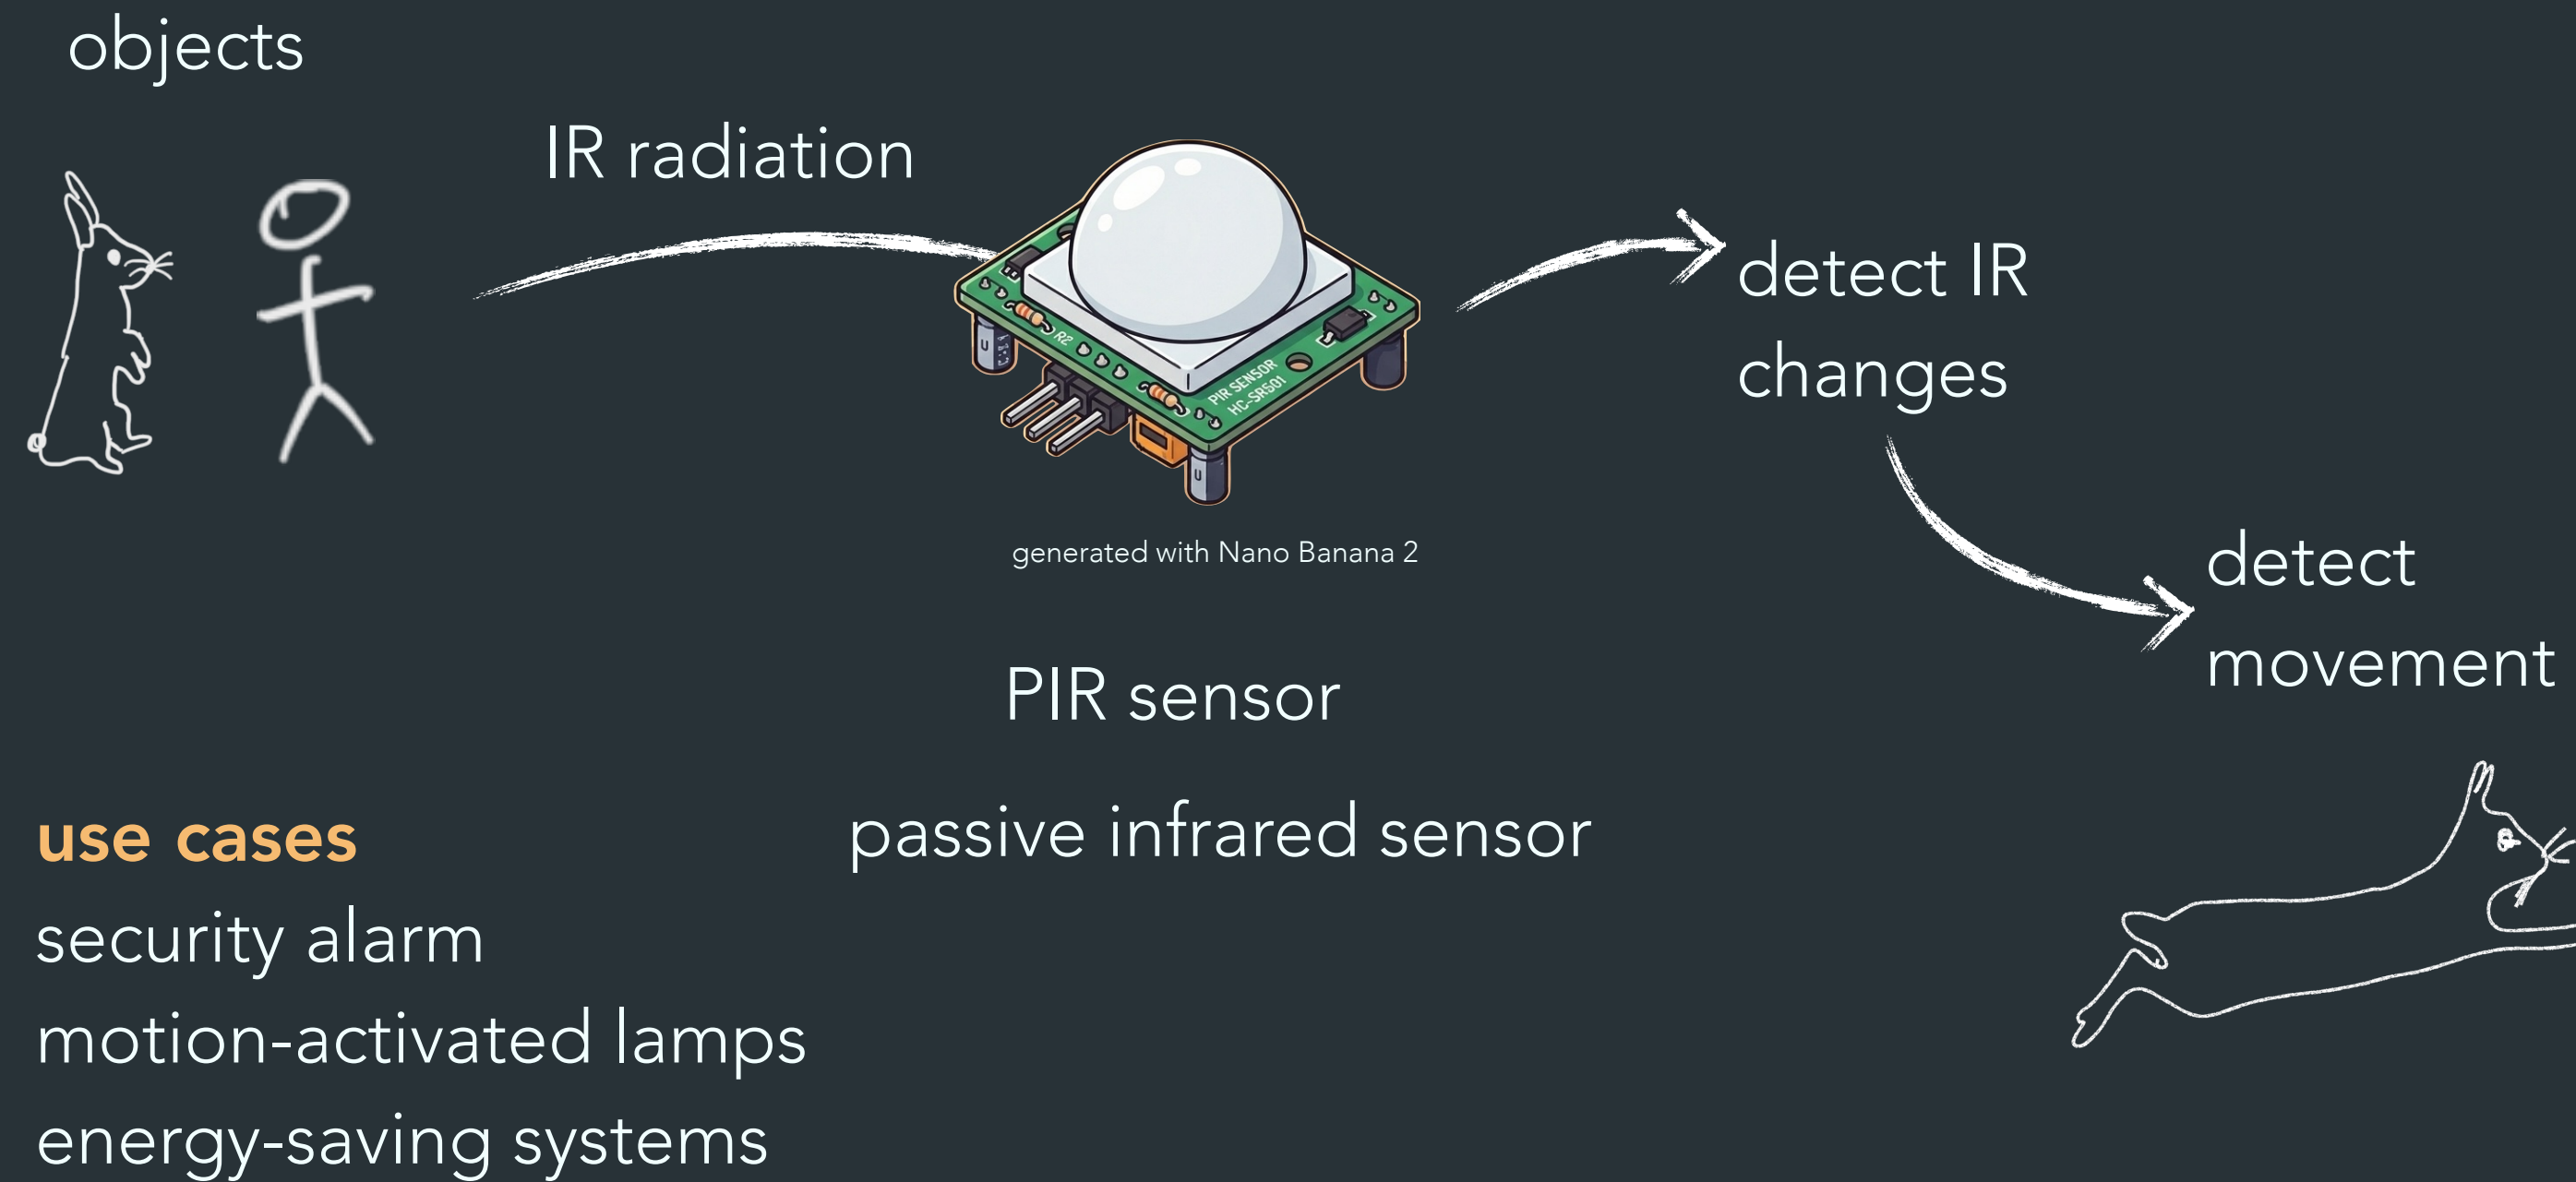

generated with Nano Banana 2

use cases

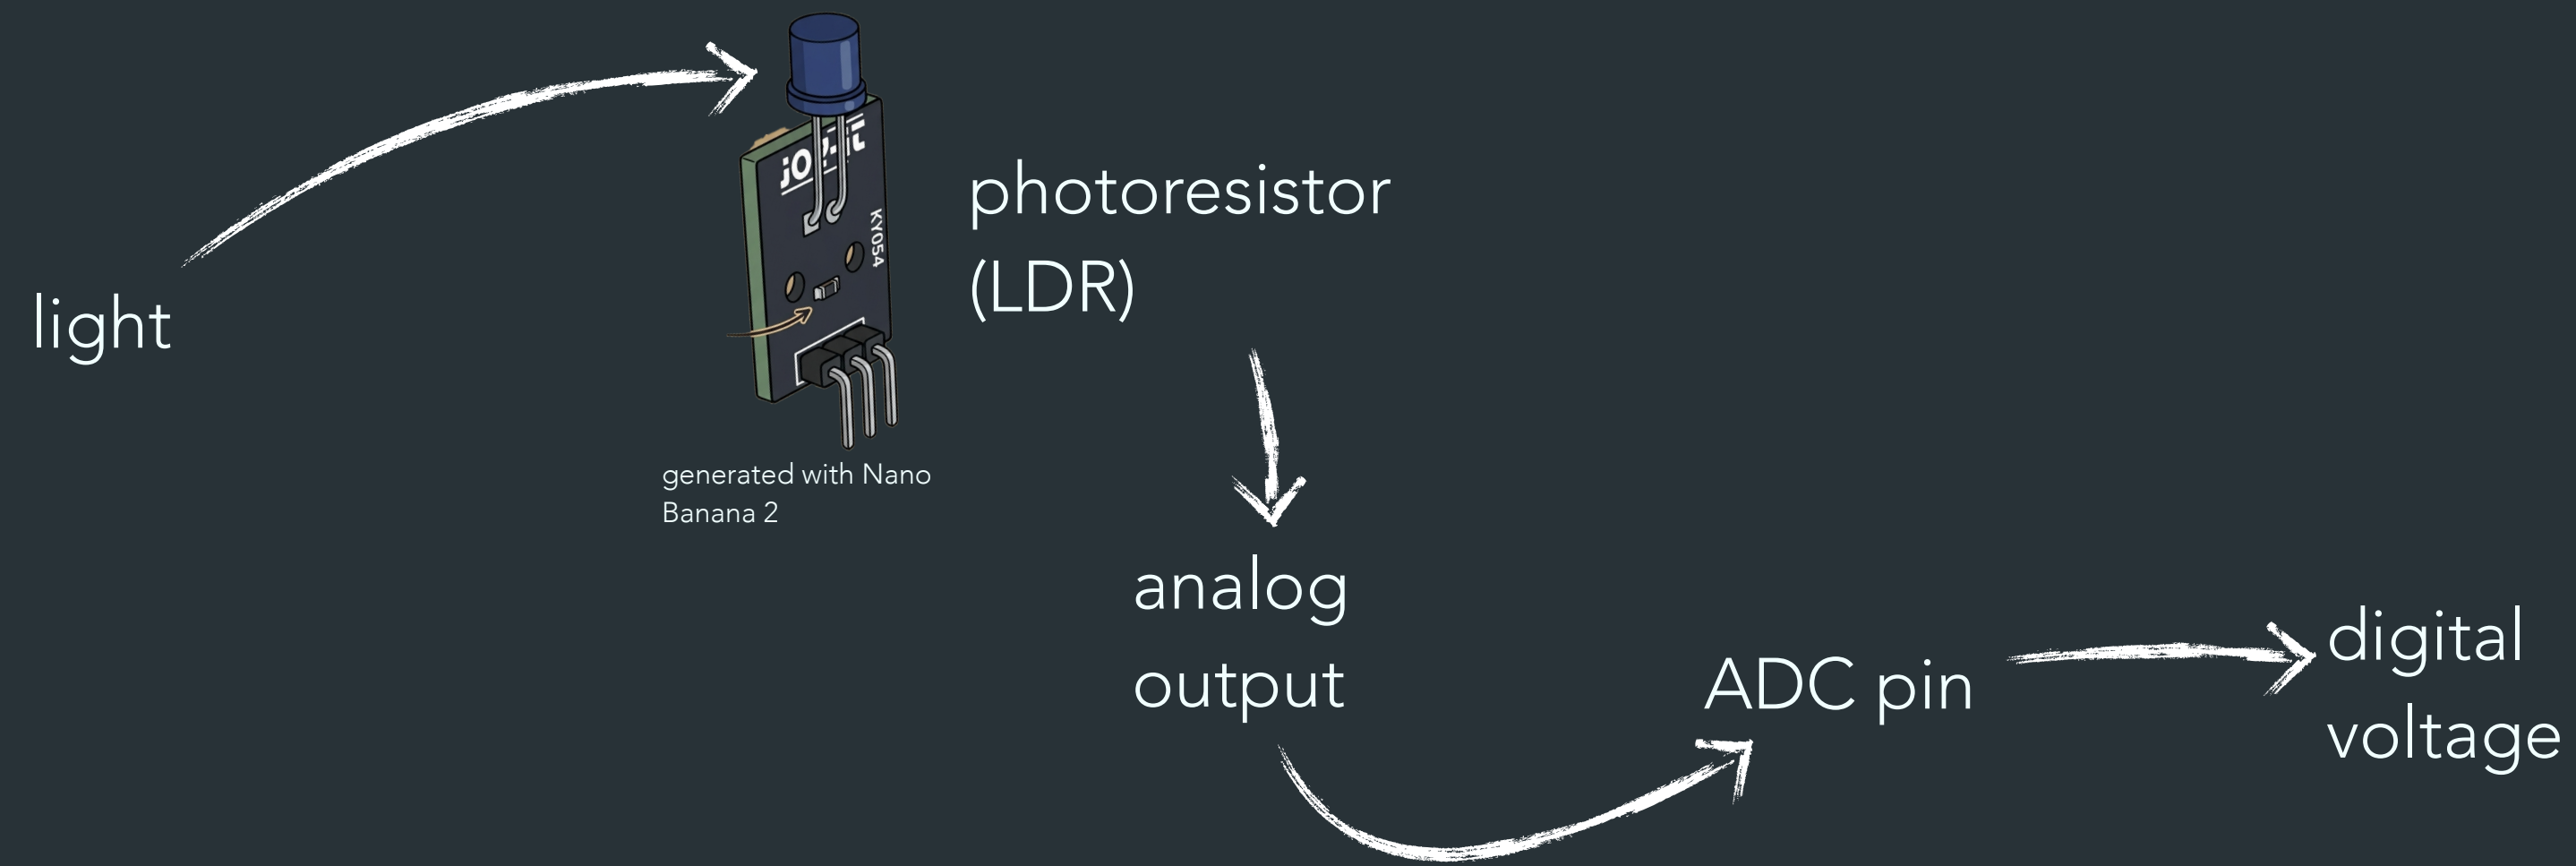

home automation
weather station
agriculture monitoring

detecting motions with **PIR sensor**

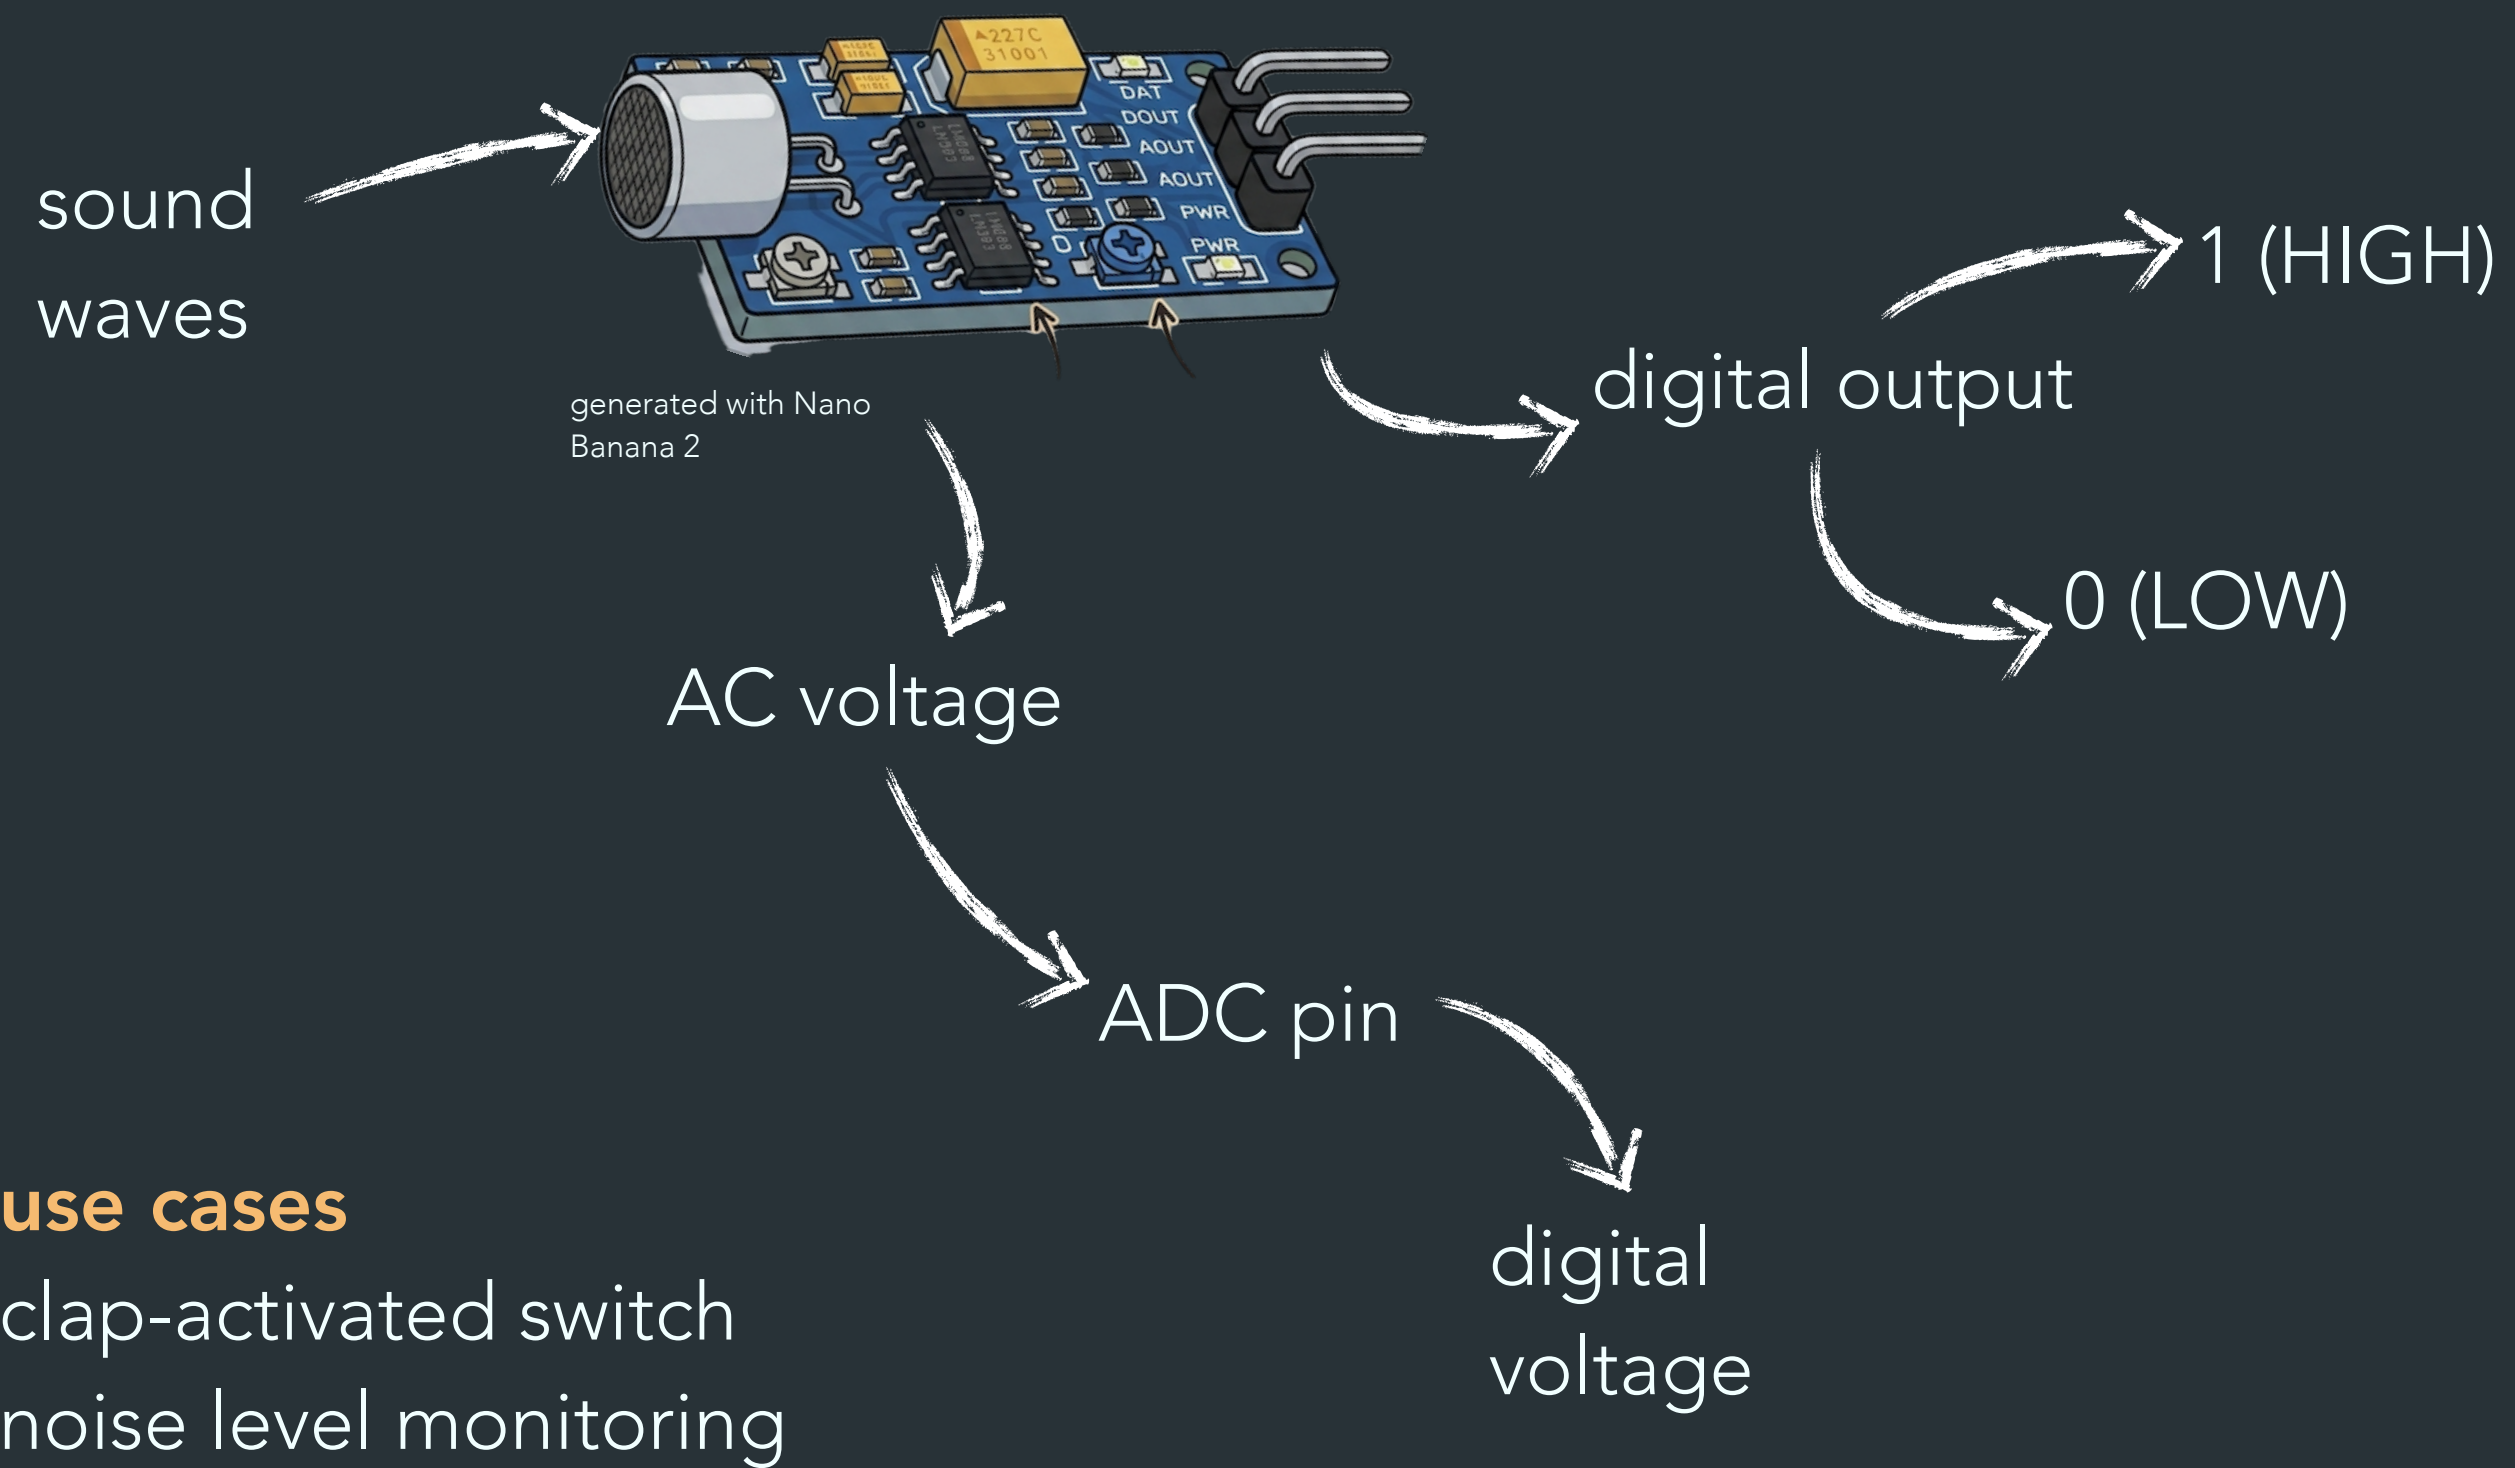

detecting light with **photosensor**

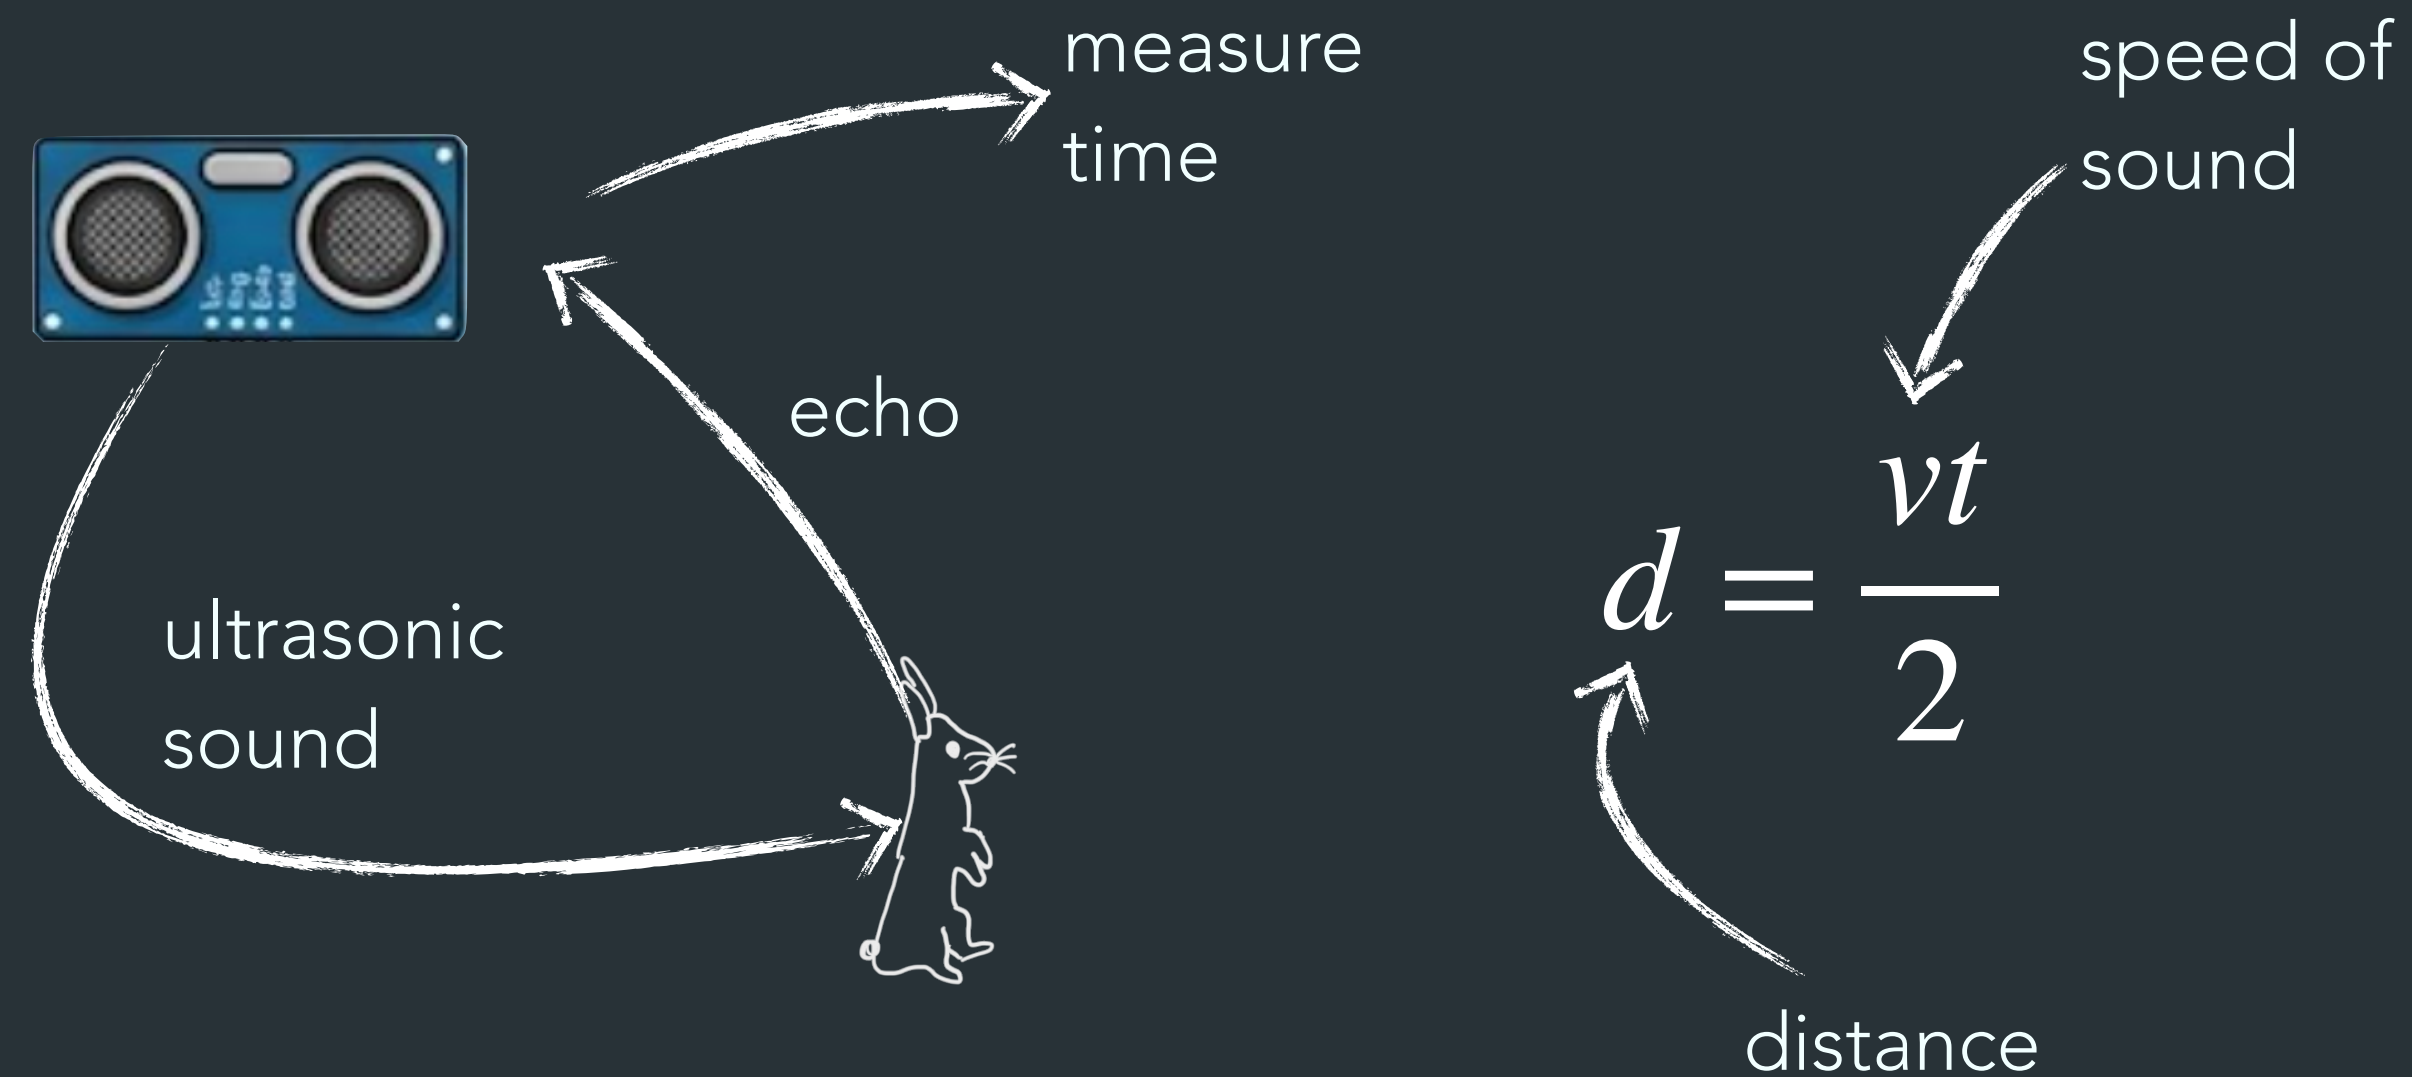

use cases

automatic lights
light-sensing alarm
line-following robots (light/dark line
detection)

measuring sound with **sound sensor**

measuring distance with **ultrasonic sensor**

use cases

robotics - obstacle avoidance
automotive parking assistance
liquid level sensing
